Professional Summary

Full-Stack & Backend Software Engineer with 4+ years of experience building business applications, backend APIs, and user-facing products. Skilled in Java 17/21, Spring Boot, React, TypeScript, Node.js, PostgreSQL, MySQL, MongoDB, AWS, Docker, Jenkins, Kubernetes, and Linux. Experienced in API integration, automated testing, production troubleshooting, and delivering features across the full software lifecycle.

Technical Skills

Backend: Java 17/21, Spring Boot, Node.js, Express.js, REST APIs, Spring Security, JWT, JPA/Hibernate
Frontend & Mobile: React, TypeScript, JavaScript, React Native, Electron, HTML, CSS
Data: PostgreSQL, MySQL, SQLite, MongoDB, SQL, relational and NoSQL data modeling
Cloud & Delivery: AWS EC2, Docker, Jenkins, CI/CD, Kubernetes, Git, Linux
Quality: Unit Testing, Integration Testing, Playwright E2E Testing, Debugging, Production Support, Agile
Languages: English Professional, French Intermediate

Professional Experience

Full-Stack Software Engineer **2022 – Present**
Fennec Global — Remote

- Build and maintain multi-tenant business-platform features for POS, inventory, subscriptions, customer communications, staff, and operational workflows.
- Design and implement Java / Spring Boot backend services, REST APIs, authentication flows, validation rules, and database-backed business workflows.
- Develop React, TypeScript, and React Native interfaces for web and mobile product features, collaborating across backend, frontend, testing, and product work.
- Investigate production issues and support delivery with AWS, Docker, Jenkins CI/CD, Linux, and Kubernetes.

Selected Engineering Projects

Madrasti Management System (MMS) — Private School Platform **2025 – Present**
Full-Stack Developer *React, Electron, Java 21, Spring Boot, MySQL, SQLite, JWT*

- Built a desktop management system for private schools covering students, teachers, groups, classes, subjects, enrollment, timetables, attendance, appointments, finances, and teacher salary.
- Implemented a React/Electron desktop client and Java 21 Spring Boot backend with JWT authentication, custom roles and permissions, MySQL server mode, and offline SQLite support.
- Developed QR-based student check-in, attendance reporting, and secure licensing/activation workflows; created unit, integration, and Playwright end-to-end tests.
- github.com/Taganas2002/sm-backend

FennecGo — FinTech Wallet Platform **2024 – 2025**
Full-Stack / Mobile Developer *React Native, Java 17, Spring Boot, MySQL, JWT, Docker, AWS EC2*

- Built a prototype wallet platform for cash-heavy markets, with separate customer and merchant/agent mobile applications.
- Implemented wallet balances, QR cash-in/top-up flows, peer-to-peer transfers, transaction history, favorites, and agent/store commission workflows.
- Developed Spring Boot REST APIs with JWT security and MySQL persistence; containerized and deployed the backend on AWS EC2.
- github.com/Taganas2002/fennecgo-backend

Scootry — Scooter Sharing and Rental Application **2023**
Full-Stack Developer *React, Node.js, Express.js, MongoDB, JWT, Leaflet*

- Built a scooter-sharing and rental application inspired by Lime and BIXI, with scooter discovery, availability, customer accounts, and rental reservations.
- Implemented REST APIs, MongoDB persistence, JWT authentication, interactive maps with Leaflet/OpenStreetMap, and wallet-related workflows.

Education

Master's in Network and Information Security **2023 – 2025**
University of Larbi Tebessi

Bachelor's in Information Systems and Software Engineering **2020 – 2023**
University of Larbi Tebessi
